Features

The DAD08 and DAD09 are digital audio distribution amplifiers that distribute a single input to eight outputs. The DAD08/09 accepts AES/EBU or SPDIF (Consumer Interface Format) digital audio input that is then reclocked, buffered and distributed to the eight outputs. The DAD08 has transformer coupled balanced input and outputs, whereas the DAD09 has a transformer coupled balanced input and direct balanced outputs. Multiple regenerated independent low jitter outputs make the DAD08 and DAD09 ideal for the most demanding digital audio signal distribution requirements in both large and small audio and video facilities. Balanced or unbalanced use is automatically selected by use of the appropriate connector panel.

- 8 outputs
- Transformer coupled input
- Transformer coupled outputs (on DAD08 only)
- 32 to 96 kHz compatibility
- Signal present indication
- Sample frequency indication
- Compatible with 110 Ohms and 75 Ohms environments
- Full control and status monitoring through the front panel of the SFR04/SFR08/SFR18 frame and the Ethernet port (ACP)
- Optional 1 fiber input (replacing 1 SDI input) or 1 fiber output (replacing 1 SDI output) on I/O panel; DAD09 only.

Applications

- Generic digital audio distribution
