Control-X from Audio Ltd

TOTAL CONTROL. AT YOUR FINGERTIPS

Designed following feedback from sound professionals, Control-X accesses the miniTX and TX2040 transmitters, even when concealed under clothing. It's technology unique to Audio – and available to you.

Remote control

Control-X uses electromagnetic induction to enable the transmitter to be controlled remotely. As long as the Control-X handset is within 20cm (8 inches), the transmitter can be switched on and off and its frequency checked and displayed, all without touching the transmitter itself.

Access even through clothing

Unlike other remote devices, Control-X can even access transmitters that are hidden beneath clothing, thanks to its electromagnetic induction technology. In costume dramas and similar applications, this facility protects the privacy of the artist and makes it more convenient for the wearer.

Frequency checks

With Control-X held within 20cm (8 inches) of the transmitter aerial, the frequency of any transmitter can be checked using a single push-button display; the frequency is displayed on an LCD panel.

Battery testing

Control-X can be used to check the battery power of any Audio Ltd transmitter or receiver, with a 6-pin Lemo connector. Additionally, the unit has external battery contacts for the testing of 9V 6LR61 type batteries. Control-X can self-test its own battery when the On and Off buttons are simultaneously pressed and released.

Size	100 x 63 x 24mm
Weight	150g including battery
Battery required	9V (IEC 6LR61) type Alkaline
